

MOUNTING ADHESIVES

Pressure Sensitive Mounting Adhesives

We offer a full range of pressure-sensitive adhesives for standard mounting projects and specialty applications, such as face mounts, interchangeable graphics and floor graphics.

Please contact us for details regarding sizes and various application.

MediaTac™

MediaTac™ consists of a smooth coating of aqueous acrylic adhesive on both sides of a 0.5 mil polyester film carrier. The adhesive's non-slip release liner allows boards coated with MediaTac™ to stack safely without slippage. MediaTac™ is suited for image decal and high-volume mounting applications, including pre-coating mounting boards. MediaTac™ is also ideal for mounting prints to smooth porous substrates such as foam boards, cardstock, GatorFoam® and tempered hardboard.

Product Code	Description	Price (Eur)
PSA26-25082	1040mm X 50m	103,5
PSA26-25164	1300mm X 50m	128,8

TransferTac™.

Drytac's economical TransferTac™ adhesive is a carrier-free hot melt adhesive protected by a moisture-stable release liner. TransferTac is recommended for use with flexible or rollable substrates. The absence of a carrier makes TransferTac™ self-trimming around most mount boards and irregular shaped items. The thin smooth coating will minimize "orange peel" when applied to ultra smooth mounting boards such as aluminium.

Product Code	Description	Price (Eur)
PSA6941328	1040mm x 100m	128,8
PSA69-51328	1300mm X 100m	160,0

TwinTac™

TwinTac™ adhesive is a specially formulated aqueous acrylic adhesive coated on both sides of a 2.0 mil clear PVC (vinyl) film. It has two release liners instead of the usual single release liner. Because TwinTac has two release liners, it is great for cut sheet applications. The double release papers protect the adhesive layer prior to processing, thus preventing contamination during handling. The product is also ideal for the production of adhesive-coated boards.

Product Code	Description	Price (Eur)
PSA47-25082	650mm X 25m	42,9
PSA47-41082	1040mm X 25m	68,7

Facemount™ UV

Drytac's Facemount™ UV adhesive is an optically clear pressure sensitive mounting adhesive protected on each side by a clear polyester release liner. It is available with permanent adhesive on both sides, or as a permanent/removable adhesive combination. Facemount UV is engineered for face mounting virtually any image to clear substrates such as PetG™, acrylic, plexiglas and polycarbonate. It is also appropriate for lenticular imaging applications and backlit display transparencies, such as Duratrans™.

Product Code	Description	Price (Eur)
PSF25082	650mm X 25m	144
PSF41164	1040mm X 50m	

WindowTac™

A clear 50µ PVC (vinyl), coated on one side with a removable and repositionable aqueous adhesive and a permanent solvent acrylic adhesive on the other. This repositionable adhesive is protected by a semi-clear, embossed filmic liner with a blue grid pattern. The grid transfers an embossed pattern into the adhesive coating. The permanent adhesive side is protected by a white silicone coated paper liner. WindowTac™ was specifically designed to make facemounting on glass easy. No bubbles, no wrinkles and no need for a wet application using a "soapy" concoction. The micro grooves in the removable adhesive allow easy air evacuation, which facilitates standard application using a squeegee or burnishing pad. WindowTac™ can also be used in "non-facemount" hand applications. Apply the smooth permanent adhesive side to the back/rear of the print and the textured side to the mounting surface.
